Avnet Brings “Digital Oilfield” Technology Expertise to 2017 Global Petroleum Show

Terms:

AT&T, Kontron, Kingston Technology and Digi International Co-Exhibit at Avnet Booth #2116

Technical experts from Avnet and ecosystem partners AT&T [1], Kontron [2], Kingston Technology [3] and Digi International [4], are showcasing the latest digital technology innovations in supply chain, manufacturing and design for the oil and gas industry in Booth #2116 at the 2017 Global Petroleum Show in Stampede Park, Calgary, Canada.

Driven by an estimated 60 percent standard of living increase in India, China and the Middle East, the World Energy Outlook of the International Energy Agency [5] has forecast that global demand for energy may rise by more than a third by 2035. To meet this demand, the petroleum industry must embrace the concept of the “Digital Oilfield,” [6]the application of digital technologies including Big Data and the Internet of Things (IoT) to optimize exploration and production processes.

For additional information about Avnet’s industry-leading product and process solutions for the energy sector [7], visit http://www.avnet.com [8]. Click here [9] for details on the 2017 Global Petroleum Show.
