Avnet Exec. Gary Lai Shares Vision for "Infinite Innovation" at 2017 China Internet of Things Summit

Terms:

The Internet of Things (IoT) was identified as a core national development strategy for China in the nation's 13th Five-Year Plan [1]. This week, high-tech executives from across the region, including Avnet Senior Marketing Manager Gary Lai, are converging at the 2017 China Internet of Things Summit [2], June 22-23, at the Beijing Marriott Hotel Northeast, to share insights and developments in the fast-growing IoT market.

Lai's presentation, "Infinite Innovation - From Idea to Solution," will address the various ways in which IoT and the semiconductor industry intersect, and the need for a robust technology ecosystem to support the hardware, software and data processing requirements of a next-generation IoT solution.

Avnet, [3] a Gold sponsor of the event, will also have representatives on hand to demonstrate the Avnet-designed "Smart Home System." For additional information about 2017 China Internet of Things Summit, click here [2]. For details on Avnet's extensive IoT solutions offerings, visit our IoT Solutions portal at https://www.avnet.com/wps/portal/us/solutions/iot/overview/ [4].
