Avnet a Big Winner in the IoT Innovation Awards

Terms:

Imagine having truly flexible cellular connectivity, with the ability to move from one carrier to another with ease—and with the same circuit card? This is the freedom that embedded universal integrated circuit cards (eUICCs) offer.

While this is a game changer even on a one-off basis, eUICCs can mean the difference between profitability and proof of concept purgatory for IoT deployments that include hundreds or thousands of connected objects.

That's exactly what got Avnet's eUICC solution, a plug-and-play eUICC dedicated to IoT developed in partnership with IDEMIA, its latest award: a Silver Winner of the Best IoT Network Solution – Commercial & Industrial in 2018's IoT Innovator Awards.

While Avnet was a big winner at the event, so were many of the partners in our ecosystem like Renesas, relayr, Western Digital, Mocana and more—a testament to the powerful knowledge network Avnet is building around the internet of Things.

See the complete list of 2018 IoT Innovator award winners [1] and then dive deeper into Avnet's eUICC offering [2].
